IFTI SAM IBN RAHMAN

Server Administrator | Junior DevOps / Cloud Engineer

+8801521422433 | sandik55575@gmail.com | LinkedIn | GitHub | Dhaka, Bangladesh

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience building AWS infrastructure, CI/CD workflows, containerized applications, and Linux-based deployment environments. Worked with Git, Jenkins, AWS CodePipeline/CodeBuild/CodeDeploy, Docker, Kubernetes, Terraform, Bash/Python scripting, and cloud networking. Focused on reliable automation, troubleshooting, and clear technical documentation.

TECHNICAL SKILLS

CI/CD & Version Control: Git, GitHub, Jenkins, AWS CodePipeline, CodeBuild, CodeDeploy
Cloud & Infrastructure: AWS EC2, VPC, ALB, Auto Scaling, RDS, CloudWatch, SNS, SSM Parameter Store, Terraform
Monitoring & Systems: Prometheus, Grafana, Linux (Ubuntu), server health checks, CPU/memory/service monitoring, Nginx, PM2
Containers & Scripting: Docker, Kubernetes, Bash, Python
Development & Data: Java, JavaScript, Node.js, React, Express.js, MySQL, PostgreSQL, MongoDB; TCP/IP, DNS, HTTP/HTTPS, SSH

PROFESSIONAL EXPERIENCE

Server Administrator - Suffix IT | *May 2026 - Present*

- Administer and monitor production and test servers, performing routine health checks and tracking CPU, memory, service availability, and overall system performance.
- Built and maintain a centralized monitoring environment using Prometheus and Grafana, replacing fragmented manual server checks with continuous metric collection and shared dashboards.
- Implemented team-based Grafana access for Development, QA, and Support through dedicated dashboards, folders, teams, and permissions, while maintaining the monitoring infrastructure and its availability.

Quality Service Assurance Intern - Summit Towers Limited | *Apr 2025 - Jul 2025*

- Maintained tower-site audit records in TowerMaster, coordinated audit activities across clients, vendors, and engineers, and prepared basic test cases for submission and data-validation workflows.

SELECTED DEVOPS PROJECTS

Highly Available 3-Tier AWS Application with Auto Scaling & CI/CD | GitHub

- Designed a custom-VPC 3-tier AWS deployment with ALB, private frontend/backend Auto Scaling environments, private RDS MySQL, and security-group-based tier isolation.
- Automated GitHub -> CodePipeline -> CodeBuild -> CodeDeploy delivery with tests, AppSpec hooks, Blue/Green deployment, CloudWatch alarms, SNS notifications, and SSM-based secret management.

Production-Style AWS Observability Platform | GitHub

AWS | Terraform | Ansible | Docker | Prometheus | Grafana | Loki

- Engineered a 4-node AWS environment for a Dockerized React/Node.js/MySQL application behind an ALB using Terraform and Ansible.
- Built full-stack observability with Prometheus, Grafana, Loki, Alloy, exporters, Blackbox monitoring, RBAC, and email alerting.
- Achieved 11/11 healthy targets, zero Terraform drift, and fully idempotent Ansible runs across all servers.

Kubernetes Todo App on AWS EC2 | GitHub

- Dockerized a Todo application and deployed it on a single-node Kubernetes cluster running on AWS EC2, demonstrating a practical container-to-cluster deployment workflow.

AWS Distributed Microservices Architecture | GitHub

- Designed and deployed a scalable microservices architecture on AWS using EC2, Nginx and ALB, integrating MySQL, Redis, BullMQ and Kafka with horizontal scaling and service isolation.

Terraform AWS VPC Bastion Infrastructure | GitHub

- Provisioned a secure AWS VPC with public/private subnets, EC2, routing, security groups, and bastion-based SSH access to a private instance using Terraform.

EDUCATION

B.Sc. in Computer Science and Engineering - Ahsanullah University of Science and Technology | 2018 - 2024
